

**NOTICE OF PUBLIC PARTICIPATION MEETING
FOR THE PROPOSED ECTOR COUNTY NORTH TO MOSS
138 kV TRANSMISSION LINE PROJECT**

**TUESDAY
JANUARY 12, 2009
4:00 PM – 8:00 PM
CAVAZOS ELEMENTARY SCHOOL
CAFETERIA
9301 WEST 16TH STREET
ODESSA, TEXAS 79763**

Oncor Electric Delivery Company LLC (Oncor) is proposing a new 138 kilovolt (kV) electric transmission line in Ector County. The proposed transmission line will be approximately 13 miles long, depending upon the route certificated by the Public Utility Commission of Texas. The proposed transmission line will connect the proposed Ector County North Switching Station (located 150 feet southeast of State Highway 158) in Ector County to the existing Moss Switching Station (located approximately 260 feet northwest of West 3rd Street) west of Odessa, in Ector County (see associated map).

Oncor is committed to routing the proposed transmission line in a manner consistent with values of the local communities, the Texas Utilities Code, and the Public Utility Commission of Texas rules and policies. The project has been recommended by the Electric Reliability Council of Texas (ERCOT) to ensure continued safe and reliable electric service in the State in light of increased integration of electric energy generated by wind production facilities. Completion of the project will enable the new transmission system to efficiently move wind-generated power to market and add capacity to the entire system. In support of the routing process, Oncor is holding a public open house meeting to solicit input for use in determining the preferred route for the proposed transmission line and to share information about line routing alternatives. PBS&J, a consulting firm retained by Oncor for the project, has identified preliminary alternative transmission line routes for consideration which are shown as dashed lines on the associated map. Ultimately, Oncor will select a preferred route and alternate routing that will be submitted for certification. The Public Utility Commission of Texas will then make a determination on which route, if any, will be constructed. Maps with greater detail will be exhibited at the meeting. Individuals attending these “come and go” open house meetings will have an opportunity to ask questions and provide comments to representatives and technical experts from Oncor and PBS&J regarding the routing of the proposed transmission line. These preliminary alternative routes are subject to modification based on information received at these public meetings and further study. If you have any questions concerning this meeting, please contact Manuel Flores at (214) 486-7345.
