4. The Public Utility Commission of Texas requires that several factors be considered when routing an electric transmission line, including:

- Proximity to single-family and multi-family dwellings and related structures, mobile homes, apartment buildings, commercial structures, industrial structures, business structures, churches, hospitals, nursing homes, and schools;
- Proximity to commercial radio transmitters, microwave relay stations or other electronic installations;
- Proximity to parks and recreational areas;
- Proximity to FAA-registered airports, private airstrips, and heliports;
- Proximity to historical or archeological sites;
- Agricultural areas irrigated by traveling irrigation systems
- Environmentally sensitive areas, and
- Protected or endangered species.

Kimley-Horn and Halff have plotted these features that we know about on the Environmental and Land Use Constraints Map. To your knowledge, are those features shown on the map accurately plotted?

Yes \_\_\_\_\_ No \_\_\_\_\_

Are you aware of any of these features that are not presently shown or are incorrectly located on the map? Yes \_\_\_\_\_ No \_\_\_\_\_

If so, would you please help us identify the approximate location of any missing or incorrectly located features in the space below? \_\_\_\_\_

5. The routing of a transmission line also includes consideration of land use factors including the following. Please rank the following factors in order of importance to you. Indicate the most important factor with a number 1, the second most important with a number 2, and so on.

- \_\_\_\_\_ a) Minimize the overall length of the line
- \_\_\_\_\_ b) Minimize the length across cultivated land
- \_\_\_\_\_ c) Minimize the length across pastureland
- \_\_\_\_\_ d) Minimize the length across road frontage
- \_\_\_\_\_ e) Minimize the length across residential areas
- \_\_\_\_\_ f) Minimize the length across wooded areas
- \_\_\_\_\_ g) Minimize the visibility of the line
- \_\_\_\_\_ h) Other (please specify)

6. The routing of a transmission line also includes consideration of paralleling and/or utilizing existing corridors (e.g. existing transmission line and roadway corridors). Please rank the following existing corridors that are found within the project study area that you would prefer the new transmission line to parallel and/or use. Indicate your first preference with the number 1, your second preference with the number 2, and so on.

- \_\_\_\_\_ a) Maximize the distance along existing transmission line corridors
- \_\_\_\_\_ b) Maximize the distance along existing roadway corridors
- \_\_\_\_\_ c) Maximize the distance along existing railroad corridors
- \_\_\_\_\_ d) Maximize the distance along existing property boundaries
- \_\_\_\_\_ e) Other (please specify)

7. The routing of a transmission line also includes consideration of the distance to habitable structures and community resources. Please rank the following in the order that you would prefer to maximize the distance from the proposed transmission line. Indicate your first preference with the number 1, your second preference with the number 2, and so on.

_____	a)	Maximize the distance from residences, including single-family and multi-family dwellings
_____	b)	Maximize the distance from commercial, industrial, and/or business structures
_____	c)	Maximize the distance from churches
_____	d)	Maximize the distance from hospitals
_____	e)	Maximize the distance from nursing homes
_____	f)	Maximize the distance from schools
_____	g)	Maximize the distance from parks/recreational areas
_____	h)	Maximize the distance from historical and archaeological sites
_____	i)	Other (please specify)
